

## Export Accruals to a Flat File

### Data mapping

Map Name: AccrualExportFileDataMappingNonCustom

Description: Map the exported data to the single amount column output file format. The output profile column IDs become the header IDs in the output file.

| Source Element                      | Function Default | Function Input                          | Function Output                | Default Value | Destination Element                  |
|-------------------------------------|------------------|-----------------------------------------|--------------------------------|---------------|--------------------------------------|
| Record/Elements/AccrualCodeName     |                  |                                         |                                |               | Record/Elements/Accrual Code         |
| Record/Elements/probationaryBalance |                  |                                         |                                |               | Record/Elements/Accrual Profile Name |
| Record/Elements/AccrualType         |                  |                                         |                                |               | Record/Elements/Accrual Type         |
